

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

AT THE UNIVERSITY PRESS.**

PREFACE.

THIS list of Papers on South African Geology was begun some three years ago for my own convenience, in connection with my work as Inspector of Water Drills in the Service of the Colonial Government. In May, 1893, the South African Philosophical Society, on the motion of Dr Muir, resolved to memorialize the Government in regard to a Geological Survey, and suggested that, as a preliminary step, a Bibliography should be compiled. At first it was my intention to have the list published by the Philosophical Society, but when the Geological Commission was appointed in 1895, and shortly thereafter interested itself in the matter, it seemed more natural that the publication should take place under its auspices.

There have been many drawbacks and delays consequent on the almost entire absence of Geological Journals and Proceedings of Societies in Cape Town, but a short visit to London in March—May this year enabled me to see many papers not to be found here. For much valuable help during that visit I have to thank Mr F. A. Bather of the British Museum. My thanks are also due to the Geologists of the Commission for the titles of many Papers.

I am well aware that the present lists are incomplete, but it was strongly represented to me that publication should no longer be delayed. Supplementary lists will be issued along with the Annual Report of the Geological Commission, and it is hoped that all the material thus tabulated will eventually be utilized in the production of a report showing the state of our knowledge of South African Geology up to the date of publication.

HARRY SAUNDERS.

CAPE TOWN,
4th November, 1896.
